

Comparison of all fleets in the main stock assessment area in the eastern Pacific Ocean

Carolina Minte-Vera

WORKSHOP TO IMPROVE THE LONGLINE INDICES OF ABUNDANCE OF BIGEYE AND YELLOWFIN TUNAS IN THE EASTERN PACIFIC OCEAN

La Jolla, February 11- 15 2019

DOCUMENT SAC-08-07b

A PRELIMINARY METADATA ANALYSIS OF LARGE-SCALE TUNA LONGLINE
FISHERY DATA IN THE EASTERN PACIFIC OCEAN: A PRECURSOR TO ECOLOGICAL
RISK ASSESSMENT

Shane Griffiths and Leanne Duffy

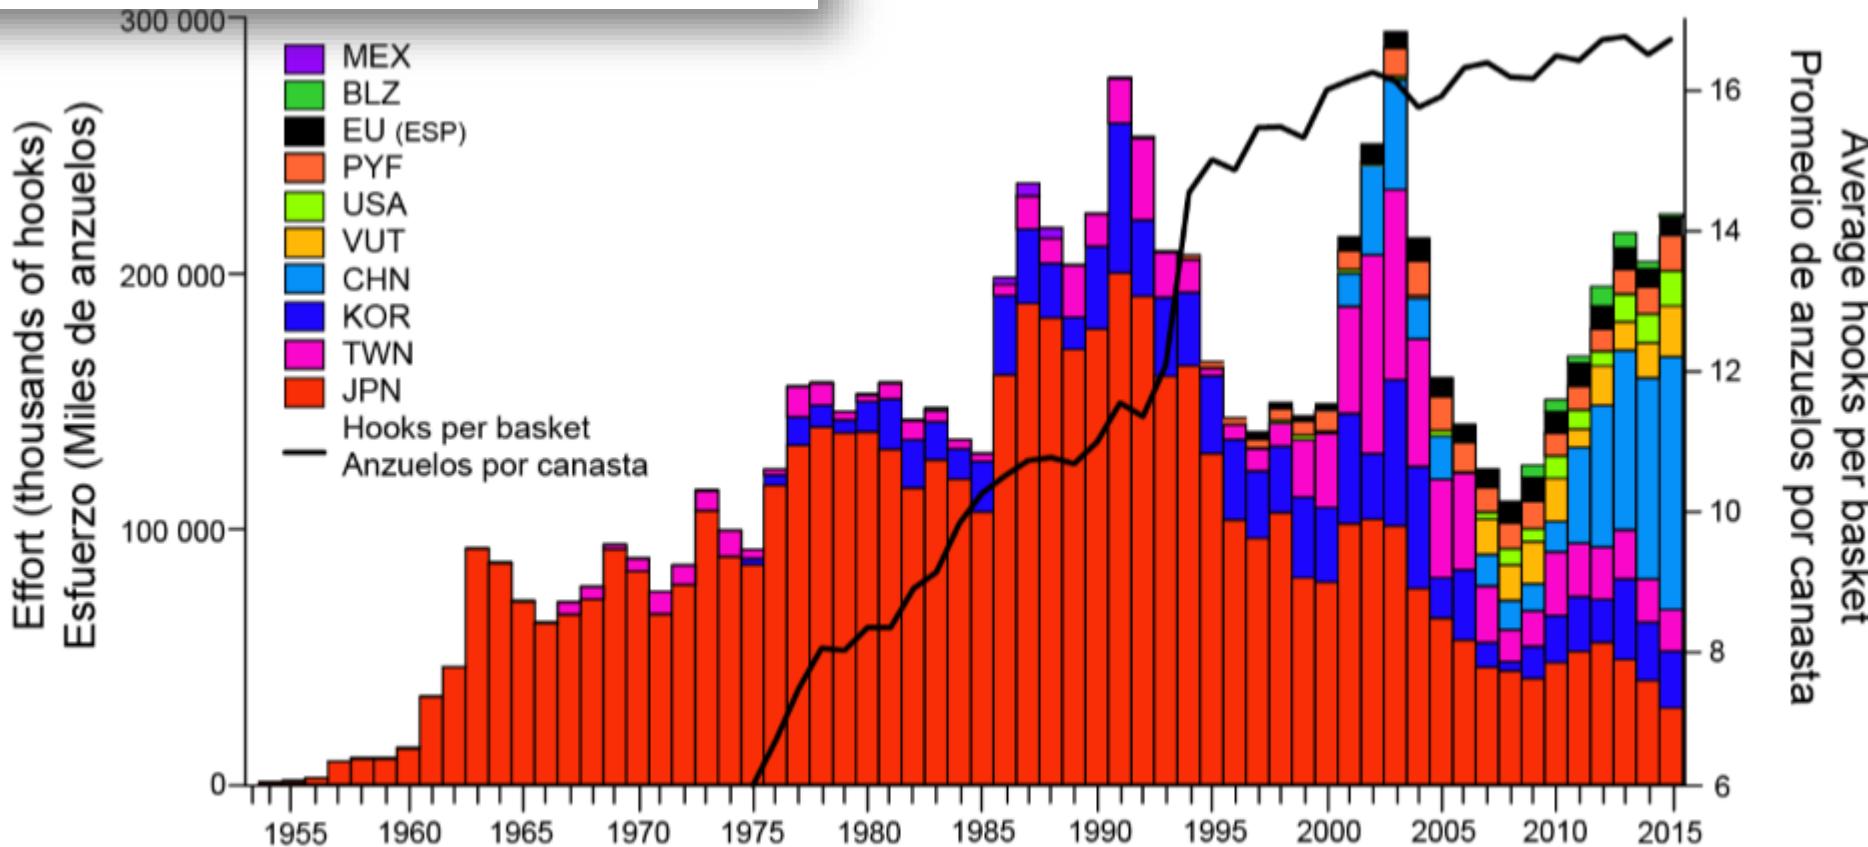

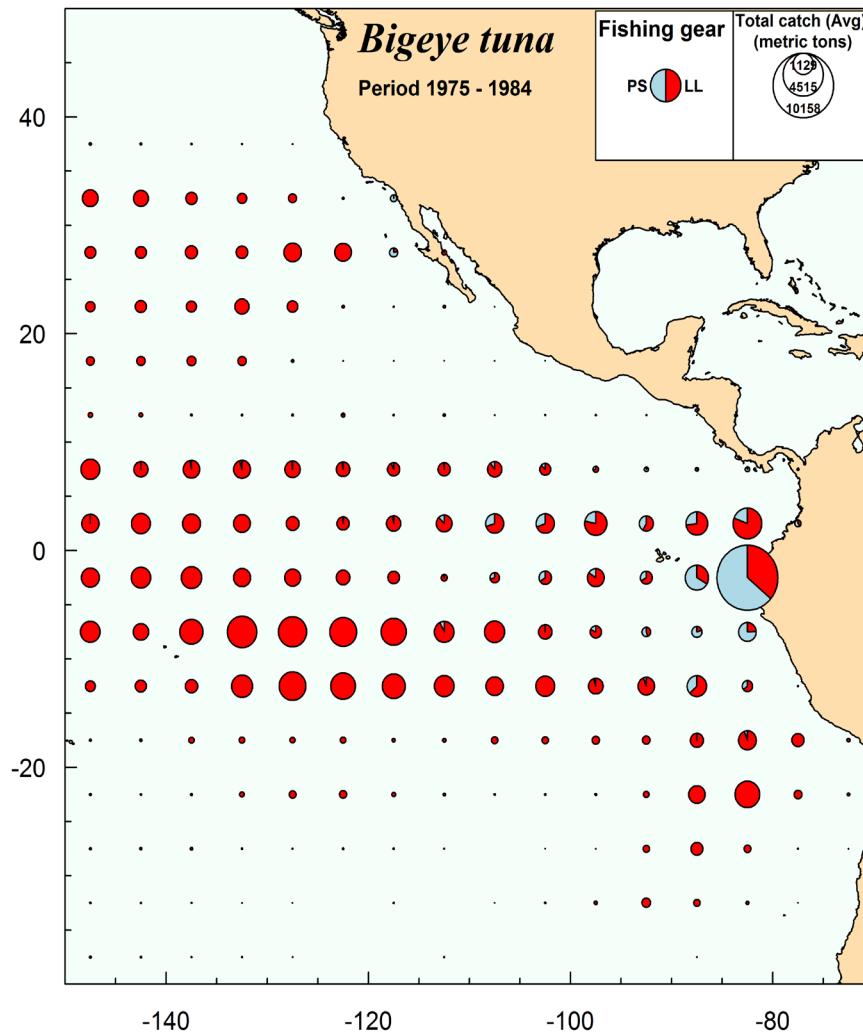

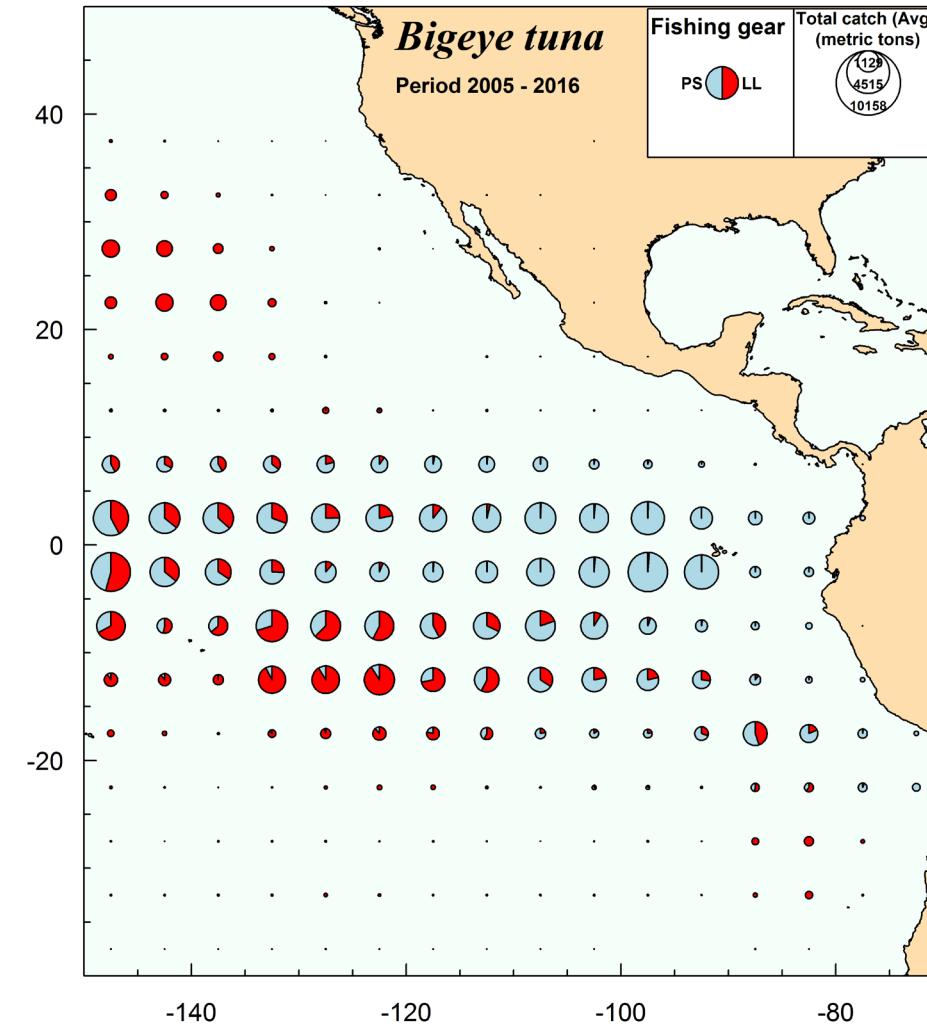

FIGURE 1. Annual fishing effort, in thousands of hooks, in the large-scale tuna longline fishery, by CPC (left y-axis), and annual average number of hooks per basket for the Japanese longline fleet (right y-axis), in the eastern Pacific Ocean, 1953-2015.

SAC-08-07b

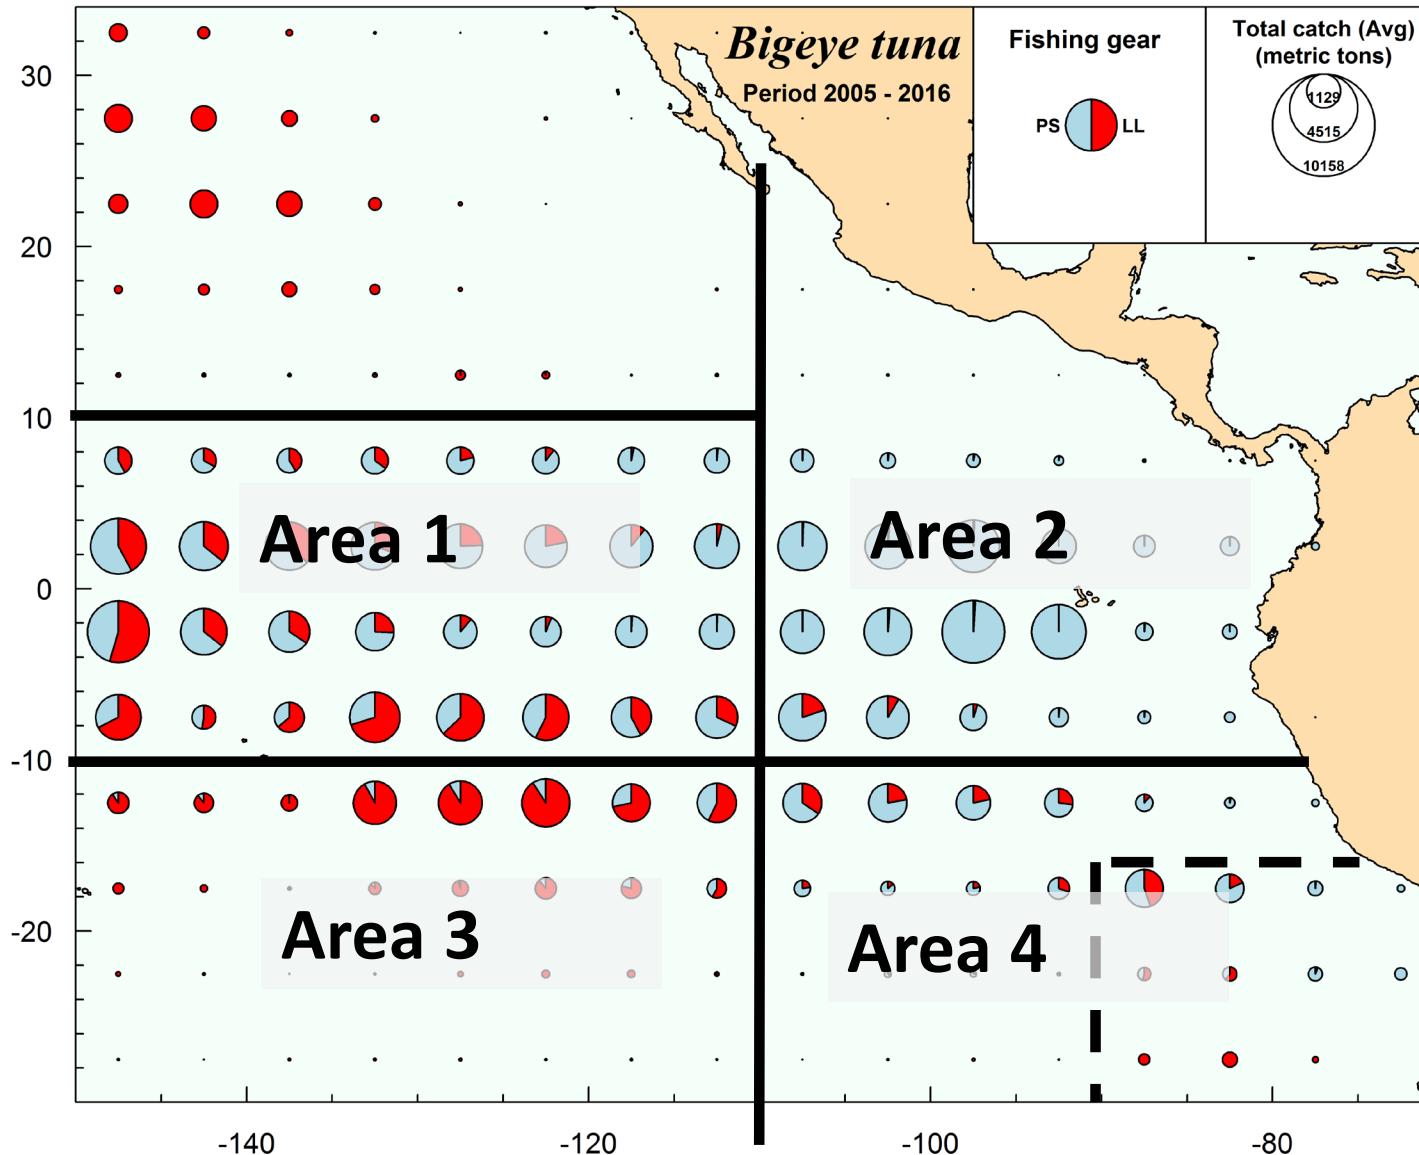

1975-1984

2005-2016

Proposal for spatial assumptions

Support:

PS: PS-OBJ LF data

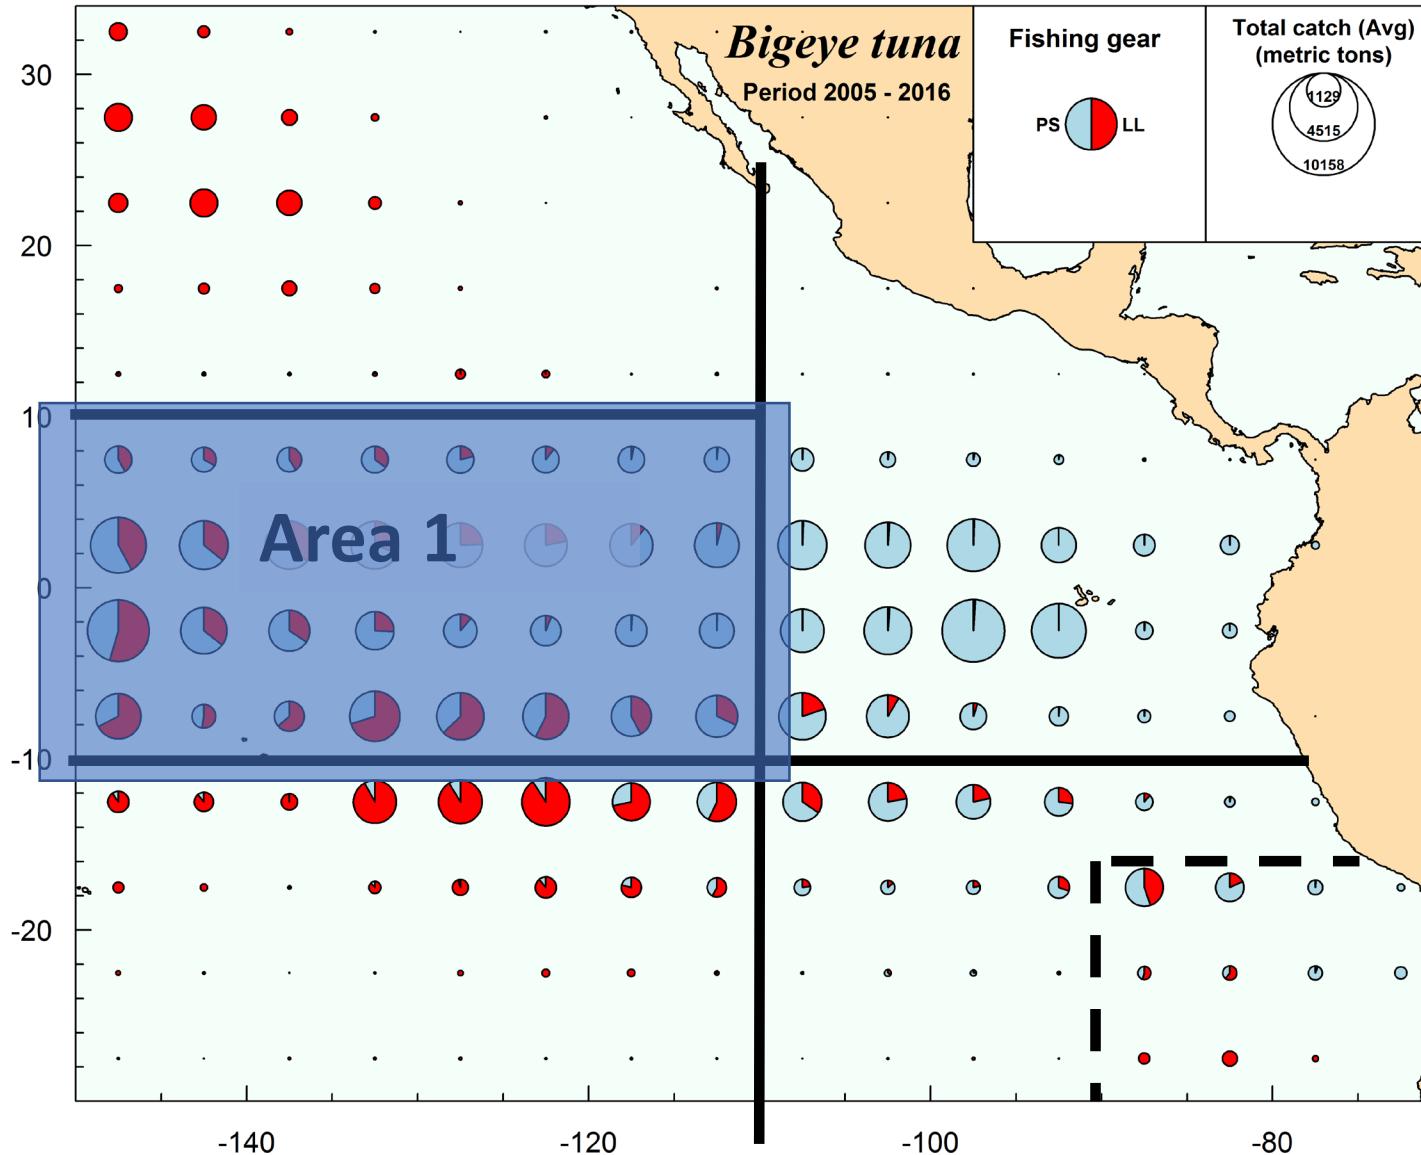

LL: early LL data

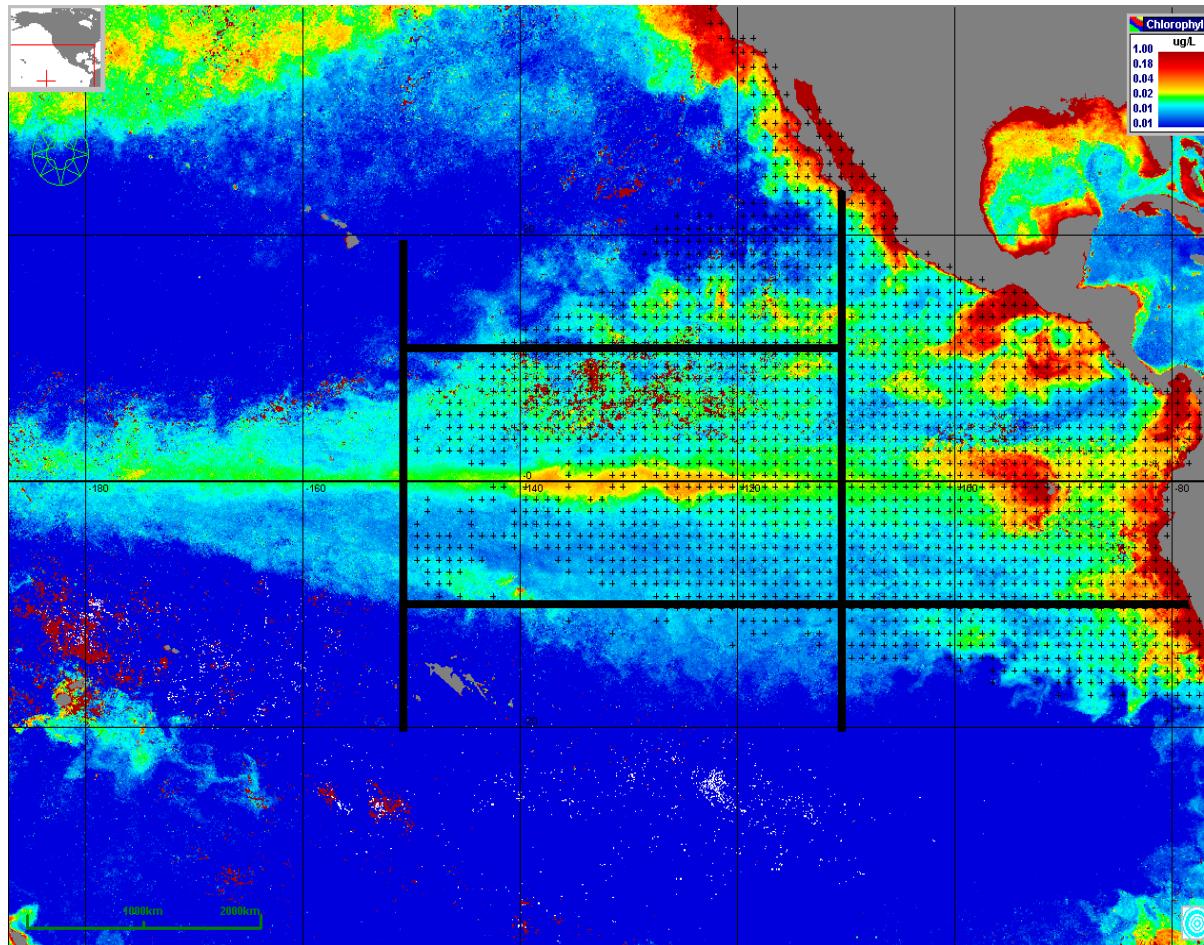

A: Quarterly anomaly
in JPN LL CPUE

p – practical consideration

Definition of two
fisheries for LL and
two fisheries for PS
(LL, PS)

Area for the comparison among fleets

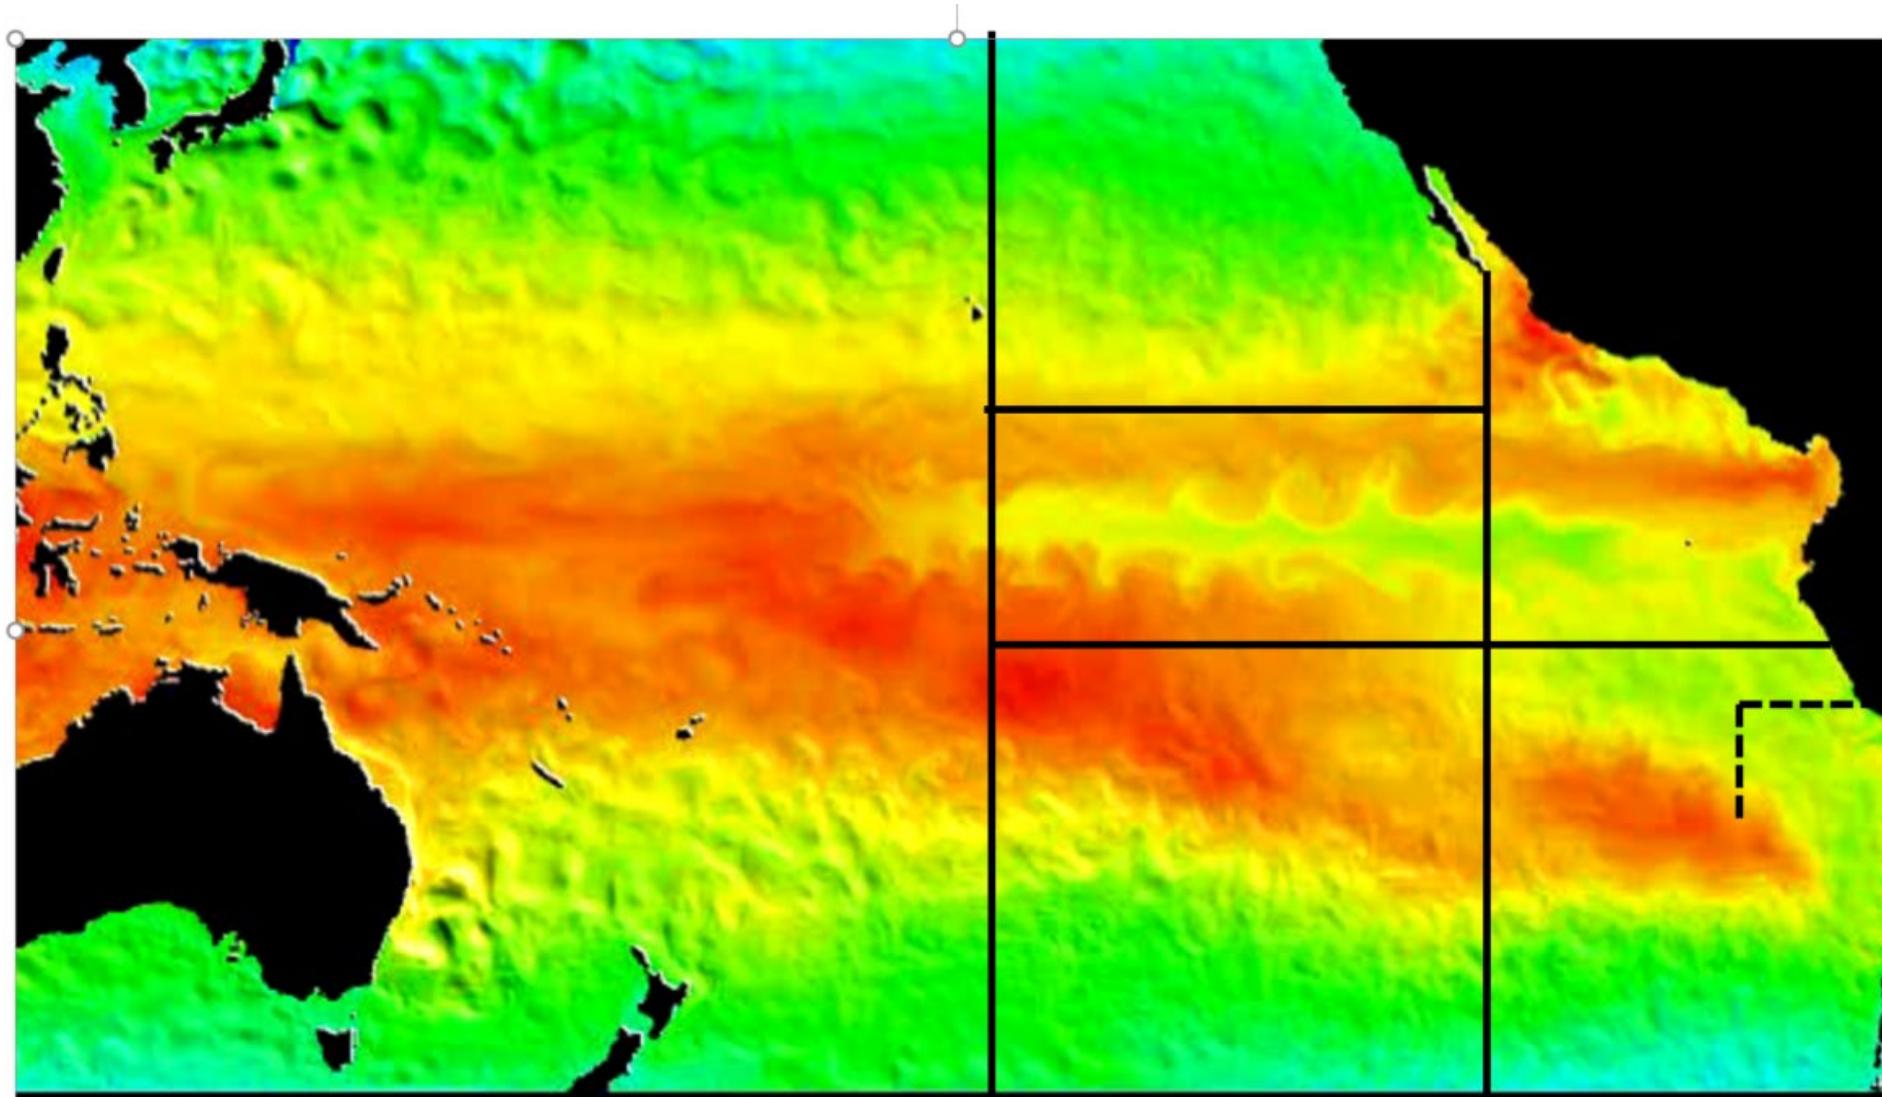

Chlorophyll-a concentrations in February, 2007, as measured by the Moderate-Resolution Imaging Spectroradiometer (MODIS). (image: EASy/SpatialAnalysis)

Primary productivity: 5N, 17N and east west at 120: The areas of higher primary productivity the EPO are the areas of upwelling close to the coast, west of the Galapagos Islands and further west of them, around the equator.

Oceanography

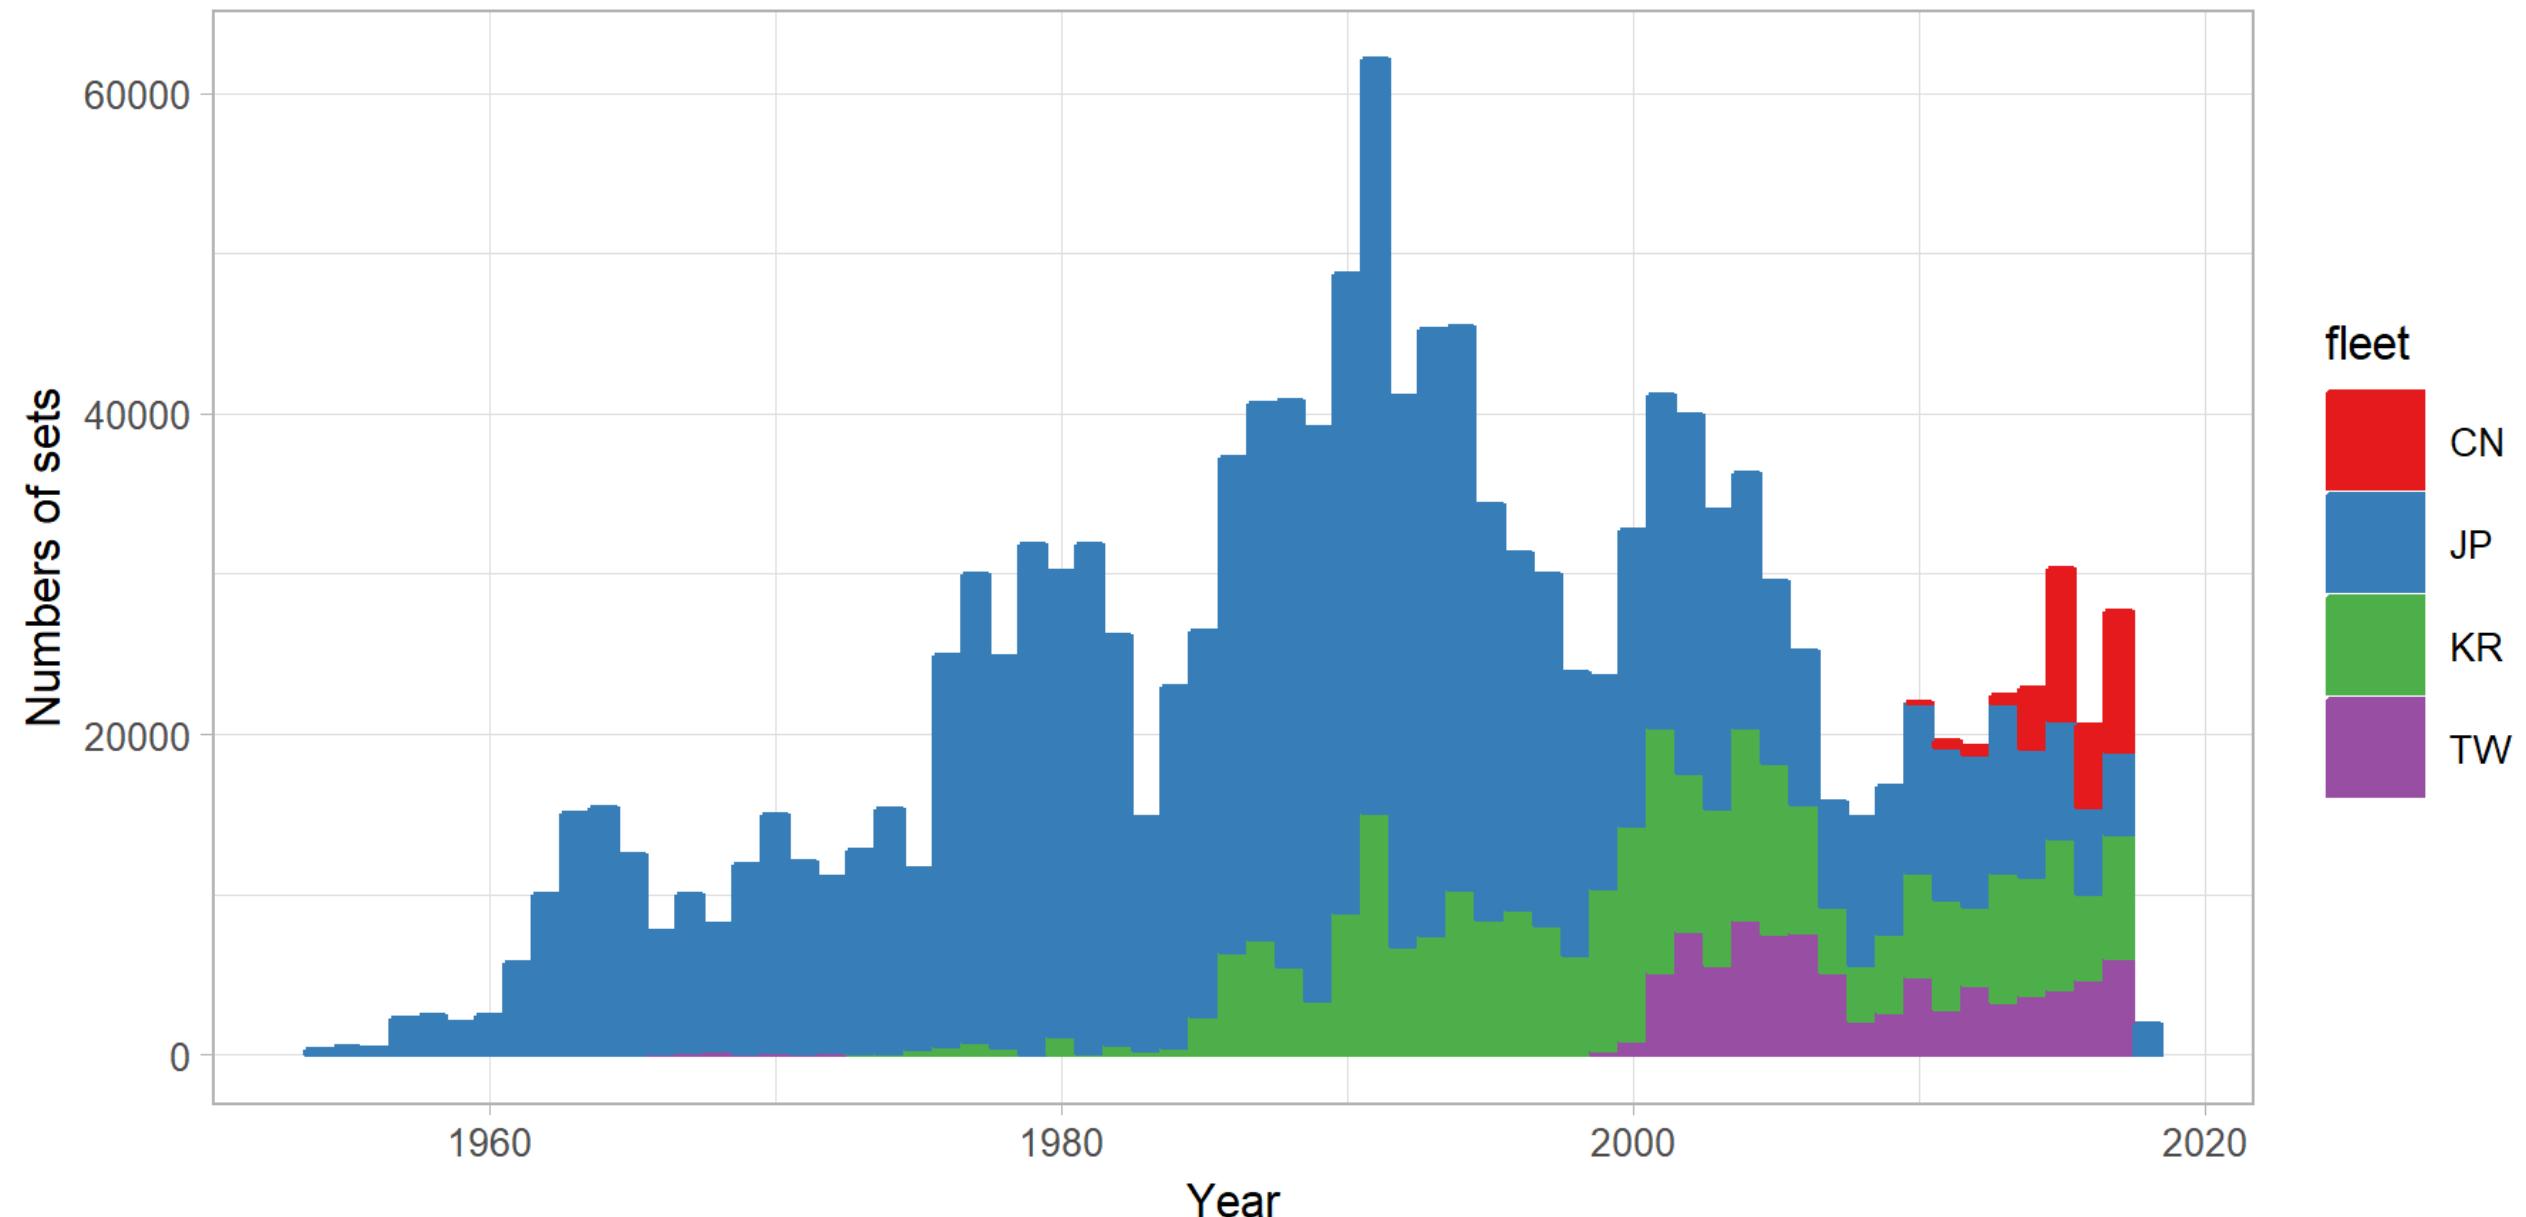

General comparisons

	Number of sets	Year start	Year end
Japan	1,078,051	1954	2018
Korea	267,776	1971	2017
Taiwan	88,692	1964	2017
China	28,254	2010	2017
