

# The purse-seine fishery is a sustainable fishery

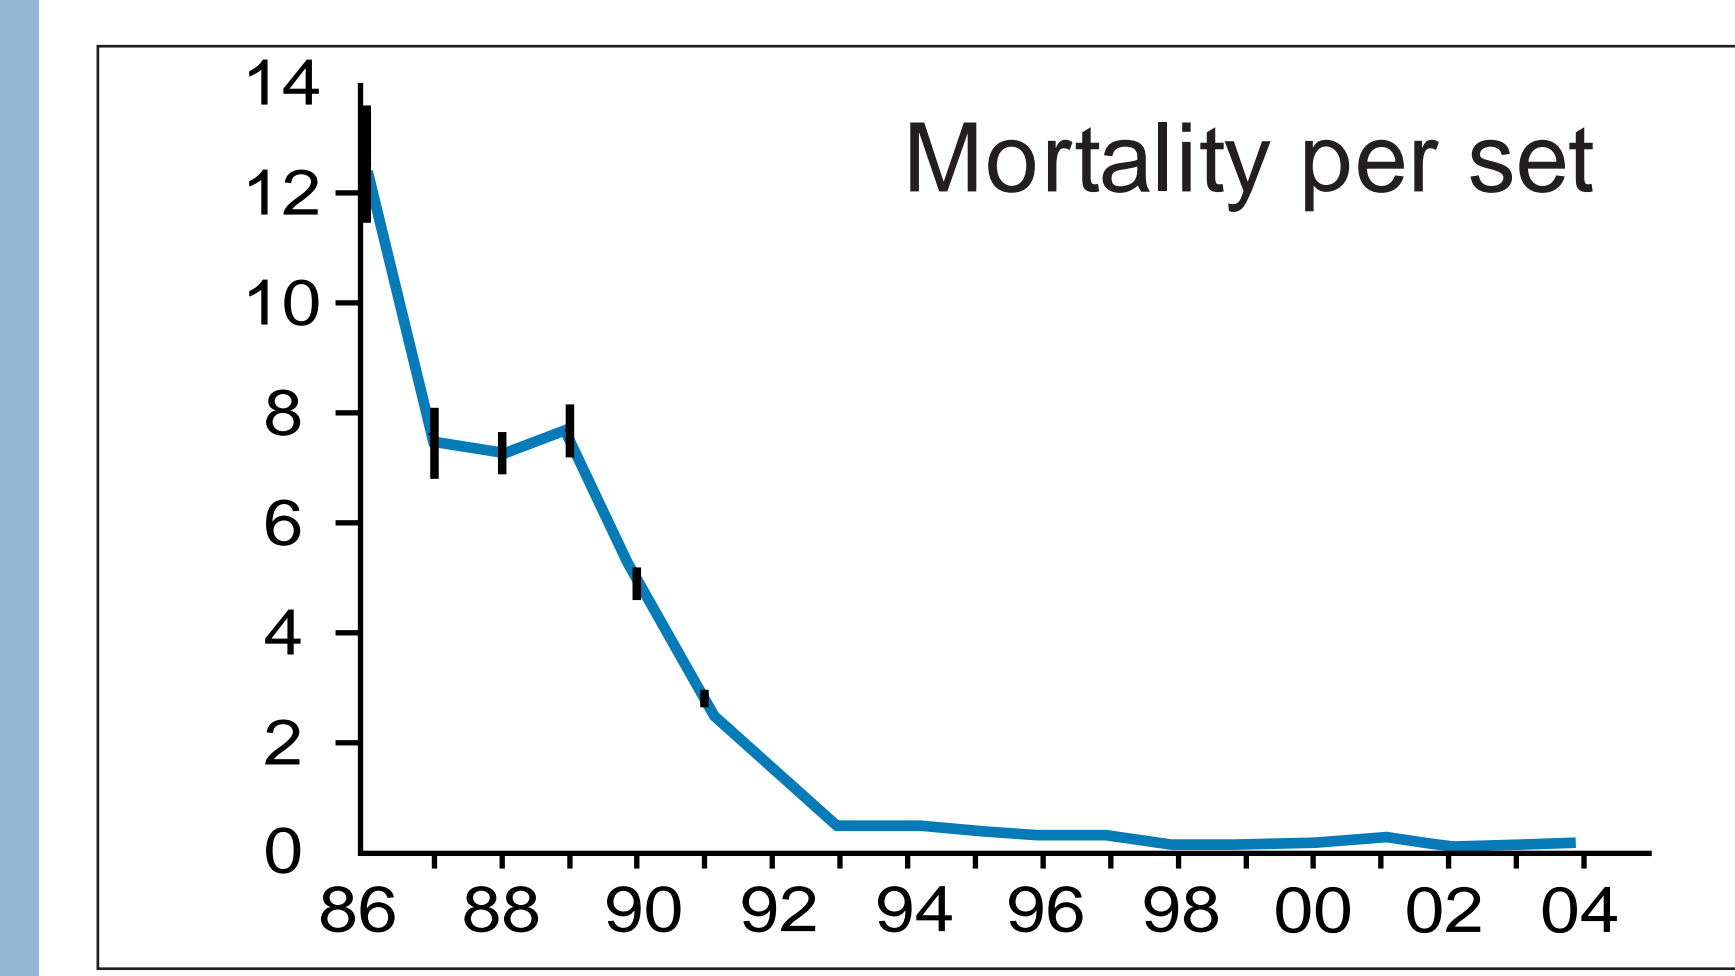

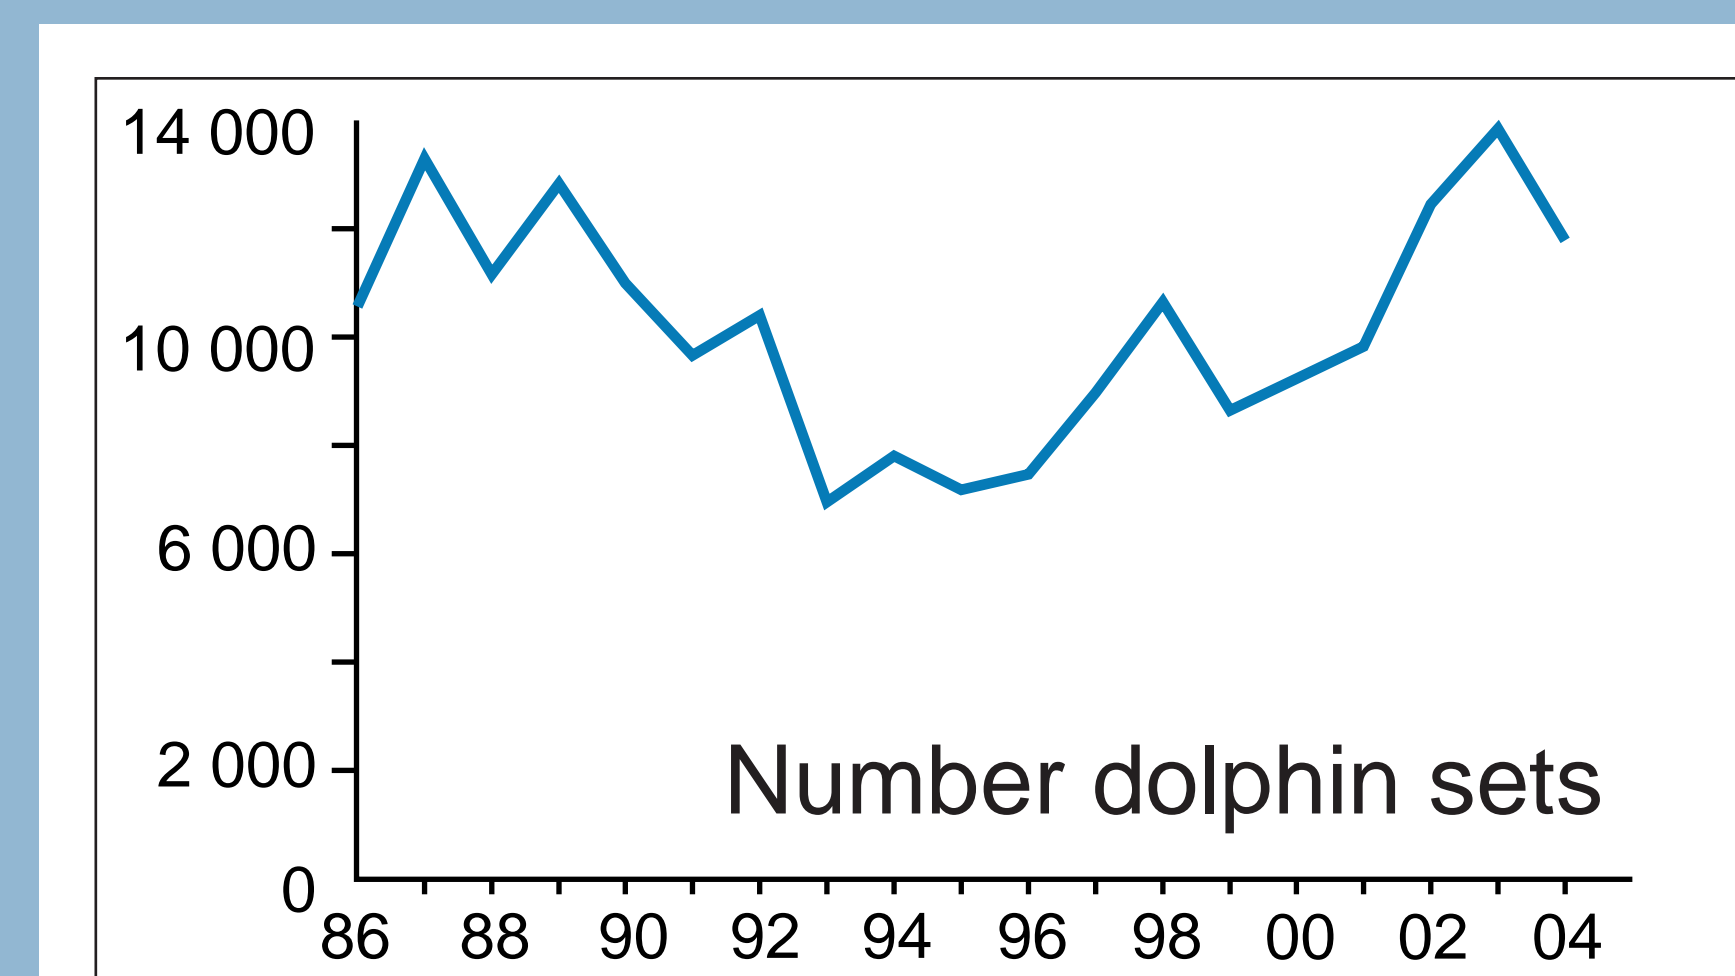

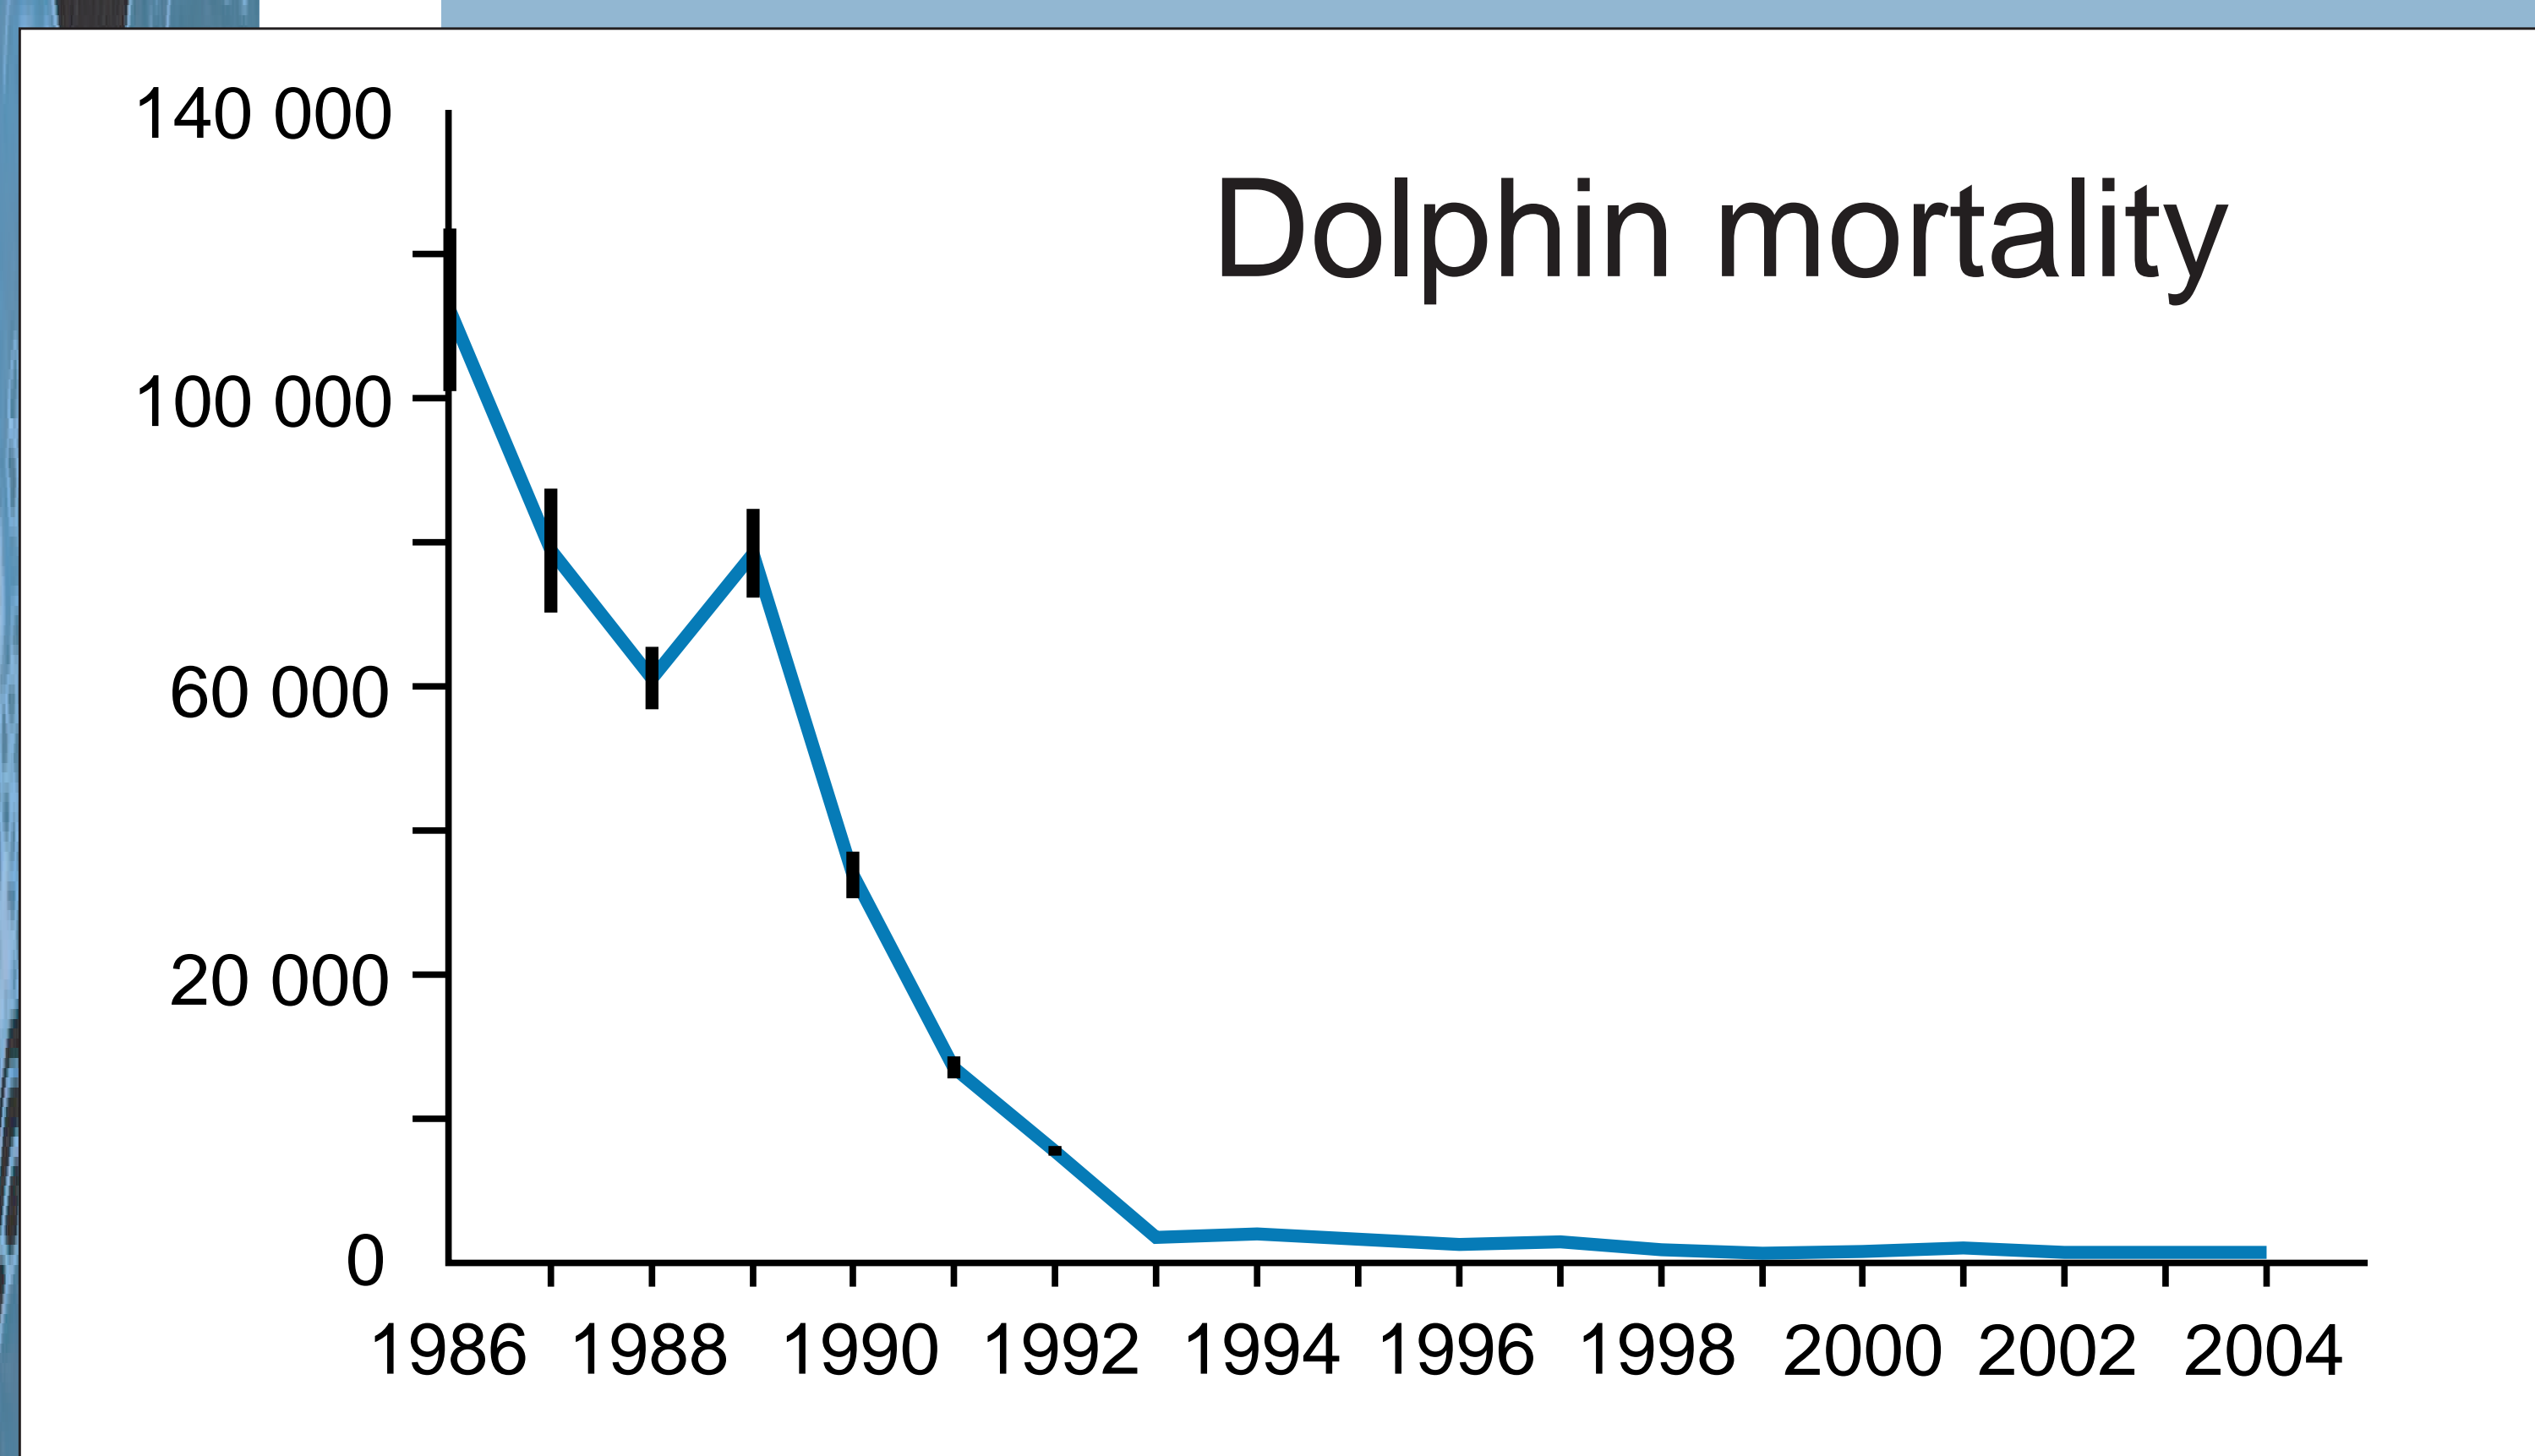

The AIDCP is also concerned with reduction of bycatch from the purse-seine fishery. In sets on tuna associated with dolphins bycatches are relatively low compared to other purse-seine set types and to most other fisheries.

	Bycatch per set (numbers)
Dolphins	0.3
Sharks and rays	0.5
Billfish	0.1
Other large fish	0.2
Marine turtles	0.002

Fishermen have worked very hard to reduce dolphin mortality.

## How was mortality reduced?

Two factors contributing to bycatches
